

MINIATURE VERTICAL-MOUNT POLYPROPYLENE FLOAT SWITCH

MODEL NUMBER: 6910.050

FEATURES & FUNCTIONS

- Molded of FDA-rated Polypropylene for reliable operation without maintenance, the switch functions include control of make-up water in food steamers, chemical processing, coolant lines, and many other equipment applications.
- These miniature level switches can be mounted up or down as they open on rise or close on rise by reversing the float. A magnetic float rising or falling in response to liquid level change actuates a hermetically sealed magnetic reed switch. The smooth surfaces are easy to keep clean, and the unit will switch small solenoid valves and relays up to 0.080A (120 VAC).
- The 6910 switch is recognized under the U/L component recognition program. A locknut for mounting is included.
