SILT DENSITY INDEX TESTING (SDI)

Portable SDI Test Assembly - direct SDI™

Model No. SDI-2000

Completely assembled in a portable, compact case, ready for on-site testing. Includes instructions for measuring silt density index.

Assembled with:
- Filter Holder
- Pressure Gauge
- Pressure Regulator
- Ball Valve
- Graduated Cylinder
- Thermometer
- Tubing
- Filter Tweezers

Also Available:
- Manual SDI Kit with Millipore® brand filter holder – Model No. SDI-2000-MIL
  (SDI-FH Millipore filter holder is pictured below)
- Optional Booster Pump Accessory:
  - SDI-PU: 115-120VAC, 60Hz
  - SDI-PE: 230VAC, 50Hz
  - SDI-PJ: 100VAC, 50-60Hz

Detailed Silt Density Index measurement instructions and calculations are shown in the technical section of our catalog.
SILT DENSITY INDEX TESTING (SDI)

Portable Automatic SDI Testers

Model Number: Y-SIMPLESDI

Complete Automatic Test Kit includes:
- Power Supply
- Battery Charger
- Accessory Case
- Pack of 100 membrane filters (0.45 micron)
- Special Tweezers for handling of the membranes
- 50 micron pre-filter

simpleSDI Makes Silt Density Index Testing Easy.

**BENEFITS OF SIMPLE SDI**

**Extremely Accurate:** Microprocessor precision plus high resolution flow measurement provides silt density index test accuracy and repeatability far beyond hand testing.

**Performs SDI-5, SDI-10 and SDI-15** tests in both 100ml and 500ml sample sizes for more meaningful silt density index results and a complete picture of filter plugging.

**Unattended operation.** Start the test and return in 15 minutes to see the results.

**Audible alerts** notify the operator at the end of the silt density index test as well as if any errors have occurred.

**Standards compliant** 47 mm membranes for lowest cost, worldwide availability. Built to the ASTM D 4189-07 standard for silt density index testing accuracy and repeatability greatly exceed the criteria of the silt density index standard.

**Continuous flow readout**(mL/min) provides detailed information in real-time of the rate of filter plugging. This data can be used to manually plot Modified Fouling Index (MFI)-like data.

**Battery Powered and light weight for true portability.** Up to 13 hours of testing between charges.

**In-field calibration and repair.** Modular design for easy field repairs. Sensor calibration is easy to perform in the field.

**Clear, easy to read LCD display** prompts the operator through the test procedure and displays current test data while silt density index tests are underway.

**SPARE PARTS AND OPTIONAL EQUIPMENT FOR SIMPLE SDI**

SILT DENSITY INDEX TESTING (SDI)

EZ™ & Enhanced Automatic SDI Monitors

The EZ™ and Enhanced SDI monitors automatically and consistently monitor the silt density index of RO feedwater. Monitoring the SDI is very useful to determine fouling problems before the membranes need replacement. Applied Membranes, Inc. now offers an economical, effective, and easy way to monitor the SDI of the feedwater entering into the membranes. Also ask us about our manual SDI Test Assembly in stock available for immediate delivery.

Distinguishing Features:
- Automatic – Easy to Install and Operate
- Uses standard filter media
- Replacing the media is an easy 2-minute process
- Monitor housed in NEMA 4X enclosure
- Designed for permanent installation
- SDI can be taken by pushing a button
- Display equipped with LED backlight, so results can be seen in any environment
- Test pressure is controlled with an internal pressure regulator, which can accommodate inlet pressures above 1000 psi.

Ultrameter III 9P - AHL Titration Kit by Myron L

The Ultrameter III performs in-cell conductometric titrations and provides a convenient way to determine alkalinity, hardness and LSI in the field. All required reagents and equipment are included in the 9P titration kit. Features: LSI Calculator, Autoranging, Adjustable ATC and Cond/TDS conversion ratios, 100-Reading Memory with Date & Time stamp, pH Calibration, Auto-off and Low Battery indicator.

**Hach DR 900 Portable Colorimeter Series**

Part Number: 9385100

The handheld colorimeter saves time in the field by allowing quick and easy access to the most used testing methods in less than four clicks. This colorimeter is waterproof, dustproof, shock resistant, and has been drop tested for greater quality assurance. This instrument comes with an intuitive user interface, a large data store data and a built-in USB port for easy transferring of information. The handheld colorimeter also helps satisfy core testing needs by offering at least 90 of the most common testing parameters.

Combining all of these features with a push button backlit display for use in low light areas, and you have a handheld colorimeter which is field ready in every way possible, and makes testing in harsh field environments a little less challenging.
Hach 2100Q Portable Turbidimeter

The 2100Q Portable Turbidimeter offers ease of use and accuracy in turbidity measurement, giving you accurate results every time.

- Easy on-screen assisted calibration and verification
- Accurate for rapidly settling samples
- Convenient data logging for up to 500 measurements
- Optical system for precision in the field

* The USB+Power Module provides additional benefit by allowing the user to transfer data to a PC in XML format, transfer data to the Citizen PD-24 printer (2960100), operate the instrument on line power (100-240Vac, 50/60 HZ), charge NiMH batteries (2971304), perform firmware updates, and quickly enter Sample and User IDs with the optional barcode scanner (LZV566).

TDS Calibration Solutions by Myron L

442 Natural Water™ Standard Solution is NIST Traceable and is used in calibrating many test instruments. It is the best choice when measuring boiler and cooling water samples, city water supply, lakes, wells, etc. "442" refers to the combination of salts mixed with deionized water to comprise this standard: 40% sodium sulfate, 40% sodium bicarbonate, 20% sodium chloride. A combination of standard salts is necessary since natural water salt type and concentration can vary greatly by location.

pH Buffer Solutions by Myron L

pH Buffer Solutions 4, 7 and 10 are mold inhibited and accurate to within +0.01 pH units @ 25°C. Myron L Buffers are traceable to NIST certified pH references and are color-coded for instant identification.

ORP Standard Test Solutions by Hanna

ORP standard solutions allow you to test the precision of ORP electrodes. For example, by immersing the electrode in HI 7020 solution, you should read within the 200 to 275 mV range (@20°C/68°F). If the reading is outside the indicated interval, clean and condition your ORP electrode in HANNA® pretreatment solution.
