DIAPHRAGM PUMPS

## **BOOSTER PUMPS | RECIRCULATING PUMPS**

# 6800/8800 SERIES

Aquatec's original product, and still the "global standard" in booster pump technology, providing reliable inlet pressure for efficient membrane utilization. These pumps are capable of continuous duty and are effective for recirculation based applications as well. They are ideally suited to work with hydro-pneumatic storage systems but are compatible with most hydraulic shut-off valves also.

These pumps are commonly used with one or more of our flow control components including: pressure switches (PSW Series), tank level controllers (TLC

Series) or electronic shut-off valves (ESO Series).

A typical "R.O. Kit" includes a booster pump, pressure switch, and a transformer. All system components are sold separately.

#### **TECHNICAL SPECIFICATIONS:**

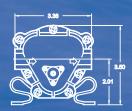

| POWER:                | Safe operation with low energy (24 watts), low voltage (12-24V) motors. Can be used with compatible transformers (100VAC, 120VAC, 230VAC), to be ordered separately.   |  |  |  |  |  |
|-----------------------|--|--|--|--|--|--|
| ENVELOPE DIMENSIONS:  | Approximately 3"x 4"x 7", 6 lbs.   |  |  |  |  |  |
| MOUNTING:             | Our patented "flex-mount" baseplate significantly dampens vibration and reduces noise.<br>Other steel mounting baseplates and "universal" baseplates are available at no<br>additional cost. Pump performance may be affected by location and positioning. |  |  |  |  |  |
| CONTROL OPTIONS:      | Internal Bypass (20-200 psi)   |  |  |  |  |  |
| FITTINGS:             | Available options include built-in 3/8", 1/4", or 5/16" John Guest half cartridges   |  |  |  |  |  |
| PRIMING CAPABILITIES: | 68X0         68X1           PRIME<br>(FEET)         7         8  |  |  |  |  |  |

PERFORMANCE MEASURED WITH FLOODED INLET (0 PSI), 70°F (21°C) AMBIENT AND WATER TEMPERATURE, AND VOLT - AGE CONTROLLED AT 24 VAC. POSITIVE INLET PRESSURE WILL INCREASE THE DISCHARGE PRESSURE BY A SIMILAR AMOUNT, FOR A GIVEN FLOW. MAXIMUM INLET PRESSURE IS 60 PSI.

SHADED AREA DENOTES CONTINUOUS OPERATION CAPABILITY AT DESIGNATED PRESSURE AND CURRENT.

All of the pump models in the Performance Data and Heat Rise charts are in the shaded area, meaning they are capable of sustaining continual running, at any of the above listed pressures, without shutting down to allow the motor to cool. To conserve wearing parts, however, the pump should only operate as needed.

Care should be exercised in selecting the proper transformer for this 24 VAC motor. The largest "wall mount" transformer from Aquatec is only rated to .80 amps. Aquatec's "table top" transformer is rated to 2.00 amps. By-Pass pressures must also be considered when selecting a suitable transformer, in the event the pump is allowed to reach the preset by-pass pressure for sustained periods.

ALL PERFORMANCE AND HEAT RISE FIGURES ARE APPROXIMATE. ACTUAL VALUES WILL VARY WITH AMBIENT CONDITIONS.

#### ACCESSORIES

## **OUR PRODUCTS**

Aquatec transformers are specifically designed to power the products in this catalog.

Nominal primary voltages/frequencies, line voltage variations, and system related feed or back pressures may influence your ultimate selection. Our transformers are both current and temperature protected for additional safety protection.

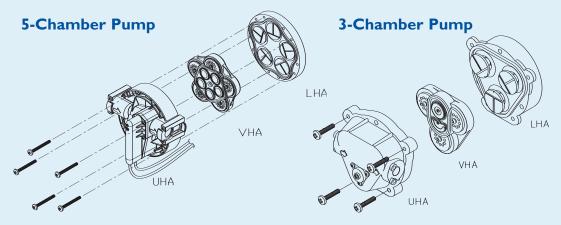

Aquatec pump-transformer combinations are designed to operate at maximum efficiency under a wide range of voltage conditions without overheating or overloading. This can save the end-user thousands of kilowatt hours per year compared to less efficient pumps.

# **REPLACEMENT KITS**

AQUATEC

Aquatec and its distributors can provide fully assembled replacement kits to allow you to further extend the life of our pump products. These kits are available in three different configurations: upper housing assembly, valve housing assembly and lower housing assembly

UHA: Upper Housing Assembly • VHA: Valve Housing Assembly • LHA: Lower Housing Assembly
