

Applied Membranes, Inc. (AMI) is a membrane treatment solutions provider for water purification, reverse osmosis (RO) desalination and water reuse. For nearly 40 years, the company has pioneered many applications and system design concepts. From membrane manufacturing, pre-treatment and membrane systems, we have been in the forefront of the industry to offer innovative solutions.

We have earned an enviable reputation for our high standards of quality, workmanship and service. Our scope of supply covers nearly every facet of membrane technology. We are one of the few companies in the world with the depth of technical expertise and experience for the breadth of the products we offer.

We manufacture spiral wound elements for RO, NF, UF and MF applications. Our membrane systems range from a few gallons for home use to millions of gallons per day for industrial and municipal use. Our hollow fiber ultrafiltration systems have proven to be the most reliable in the industry.

Applied Membranes systems and membranes are operating in over 100 countries in many diverse applications including beverage, pharmaceutical, dialysis, power generation, desalination, agriculture and water reclamation.

We have expertise in contaminant removal, ultrapure water, water for injectables, semiconductor manufacturing and food processing.

Applied Membranes is continuing to expand into new applications and partnering with other companies to offer state-of-the-art methods to provide optimum solutions for water treatment.

Our close relationships with major companies in the industry gives us a unique position to offer solutions with best available technology.
